1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a wave absorber composed of ceramic particles, classified in class 428, subclass 404.
 - II. Claim 13-20, drawn to a wave absorber using polymers, classified in class 523, subclass 137.
 - III. Claims 21-26 and 34-35, drawn to a semiconductor device using wave absorber, classified in class 428, subclass 901.
 - IV. Claims 27-30, drawn to an optical communication device with wave absorber, classified in class 398, subclass 182.
 - V. Claims 31-33 and 37, drawn to an automatic tollgate device with wave absorber, classified in class 340, subclass 928.
 - VI. Claim 36, drawn to an electronic equipment casing with wave absorber, classified in class 361, subclass 600.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II-VI are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because an electromagnetic wave absorber composed of ceramics would not have had to use polymers or been required for use in semiconductor, optical transmission, tollgate and

electronic equipment systems. The subcombination has separate utility such as an absorber with polymers, and semiconductor, optical transmission, tollgate and electronic casing systems.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
